**NEW HUBNER REDLINE™ HYBRIDS OFFER FIRST-TO-MARKET GENETICS**

WEST LEBANON, INDIANA—Corn growers seeking the very latest genetics developed to maximize yield potential and disease resistance will be able to source such products through Hubner Seed's new RedLine hybrids available for 2008.

Already a consistent supplier of the latest traits, including this year's new VT3 triple-stack hybrids, and other seed innovations, such as Intellicoat® Early Plant® corn and proprietary Fill-and-Drill™ preinoculated soybeans, Hubner now offers its elite RedLine products as a result of the company's new alliance with the foremost germplasm and technology provider in the seed industry.

Bred and tested to deliver the ideal combination of superior agronomic and yield performance, RedLine hybrids serve farmers' ever-increasing needs to maximize productivity and profit potential.

This year's Hubner lineup features eight of these elite base genetics, available in a number of traits and maturities to meet a wide range of grower applications.

**About Hubner Seed Company**

Hubner Seed Company, Inc., is a family-operated producer and retailer of high-quality, high-performance seed for corn, soybean, wheat and alfalfa growers throughout the United States.
