Test Comments: *Wet spring delayed planting but corn looked great coming out of the ground. Most of the summer had adequate rainfall except for a time in late August, early September. Disease was not an issue and corn was standing at harvest time. Overall rating of the plot is 9 out of 10. (10=best)*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
